# HTML Tags

A tag has a name and is surrounded by angle brackets.

< Left Angle Bracket

> Right Angle Bracket

<div> The div tag

# HTML Tags

Some tags are wrapper tags and need a closing tag.

`<div>Stuff goes in between these two</div>`

Some tags are self-closing tags, and only need one.

`` self-closing tag.

There's a set number of predefined tags for you to choose from!

# TAGS TAGS AND MORE TAGS

a	data	h1-6	object	strong
abbr	datalist		ol	style
address	dd	i	optgroup	sub
area	del	iframe	option	summary
article	details	img	output	sup
aside	dfn	input		
audio	dialog	ins	p	table
	div		param	tbody
b	dl	kbd	picture	td
base	dt	keygen	pre	template
bdi			progress	textarea
bdo	element	label		tfoot
blockquote	em	legend	q	th
body	embed	li		thead
br		link	rp	title
button	fieldset		rt	tr
	figcaption	main	ruby	track
canvas	figure	map		
caption	font	mark	s	u
cite	footer	menu	samp	ul
code	form	menuitem	script	
col		meta	section	var
colgroup	head	meter	select	video
command	header		shadow	
content	hgroup	nav	small	wbr
	hr	noframes	source	
	html	noscript	span	

Don't worry, you don't need to memorize  
all of them, just the important ones!

Let's break down some code

```
<DOCTYPE html>
<html>
  <head>
    <title>A Cool Site</title>
    <link rel="stylesheet" href="styles.css" type="text/css"/>
  </head>
  <body>
    <section id="wrap">
      <h1 class="page-title">Welcome!</h1>
      <p>This is a webpage.</p>
      <a href="about.html">About Page</a>
    </section>
    <footer>
      <small>Copyright 2015</small>
    </footer>
  </body>
</html>
```

<DOCTYPE html>  HTML 5 Doctype

<html>  All HTML starts with this

<head>

<title>A Cool Site</title>

Attribute 

<link rel="stylesheet" href="styles.css" type="text/css"/>

</head>

self-closing tag 

<body>

<section id="wrap">

<h1 class="page-title">Welcome!</h1>

<p>This is a webpage.</p>

<a href="about.html">About Page</a>

Indentation for readability 

</section>

<footer>

closing tag 

<small>Copyright 2015</small>

</footer>

</body>

</html>  All HTML ends with this

Looks awesome!  
How about some CSS?

# Cascading Stylesheets

Not a programming language.

Describes how html elements look.

Uses a top-down approach to styling.

CSS just makes things look pretty!

```
div#wrap {  
    background-color: red;  
    color: white;  
    padding: 10px;  
    border: 3px outset black;  
}  
  
.product {  
    margin-left: 10px;  
    font-size: 20px !important;  
}  
  
a:hover {  
    text-decoration: none;  
}  
  
ul { list-style: none; margin: 0; }
```

div#wrap { ← left curly brace

background-color: red;

color: white;

padding: 0px; ← colon separates attribute from value

border: 3px outset black; ← semi-colon ends a style

} ← right curly brace

.product ← CSS Selector

margin-left: 10px;

font-size: 20px !important;

} ← Important overrides previous declaration of this

a:hover {

text-decoration: none;

} ← styles can be on a single line

ul { list-style: none; margin: 0; }

`div#wrap`  matches only `<div id="wrap">`

```
background-color: red;  
color: white;  
padding: 10px;  
border: 3px outset black;  
}
```

`.product`  matches any element with a `class="product"`

```
margin-left: 10px;  
font-size: 20px !important;  
}
```

`a:hover`  matches `<a>` when a mouse cursor hovers over it

```
text-decoration: none;  
}
```

 matches all `<ul>` regardless of attributes

```
ul { list-style: none; margin: 0; }
```

CSS uses selectors to  
match HTML elements

# CSS Selectors

#id

#wrap

<div id="wrap"></div>

.class

.product

<p class="product"></p>

element

body

<body></body>

:pseudo-class

:hover

mouse over

\* all the things

\*

\*

[attribute]

[data-method]

<a href="#" data-method="post"></a>

# Things to remember

- HTML 5 references the latest doctype
- CSS 3 is the latest version of CSS
- id and class are HTML attributes
- each #id can only be used once per page
- each .class can be used many times
- HTML and CSS are markup languages
- A code text editor is your best friend. If you're using notepad, you're gonna have a bad time.

# Questions?

! ? ?
