

# PHP Redux

A Quick Overview

# Variables

```
$myVariable = "a string";
```

```
$myVariable = 100;
```

```
$myVariable = array(  
    1, 2, 3, 4, 5);
```

```
$myVariable = array(  
    "name" => "Russ Smith",  
    "age"  => 32  
);
```

# Conditionals & Flow

```
$age = 32;  
if ($age >= 21) {  
    echo "Can Drink";  
} else {  
    echo "Can Not Drink";  
}
```

```
$ages = array(2, 32, 33, 19);  
  
foreach ($ages as $age) {  
    echo "This age is {$age}";  
}
```

This age is 2

This age is 32

This age is 33

This age is 19

# Functions

```
function isOldEnough($age) {  
    if ($age >= 21) {  
        echo "Can Drink";  
    } else {  
        echo "Can Not Drink";  
    }  
}
```

```
isOldEnough(32);
```

Can Drink

```
function isOldEnough($age) {  
    return $age >= 21;  
}
```

```
$oldEnough = isOldEnough(32);
```

```
SoldEnough == true
```
